Drainage Analysis Study- Neighborhood Meetings

***A series of meetings in March and April will give updates
on the City's study of six watersheds***

***Residents, businesses, property owners invited to attend the meeting
corresponding to their watershed location***

Last year, the City of New Rochelle engaged consultants for a Citywide Drainage Study to analyze issues in the watershed districts located throughout New Rochelle. A total of six drainage basin areas were reviewed: Burling Brook, Hutchinson, Pinebrook, Sheldrake River, Shoreline, and Stephenson Brook. Input was solicited from property owners who had experienced severe flooding and this information was compiled along with City data and hydrologic analyses to identify potential drainage improvements that would be included in a final report.

At a series of neighborhood meetings planned for March and April, the City's consultant Brooker Engineering will give an overview of the process to date for each of the six watersheds. Residents, businesses and property owners are invited to attend the meeting corresponding to their watershed location. Meetings will take place at City Hall, 515 North Avenue, in the Council Chambers at 6PM as follows.

Wednesday, March 22	Pinebrook
Monday, March 27	Shoreline
Thursday, March 30	Hutchinson
Monday, April 3	Burling Brook
Monday, April 17	Stephenson Brook
Wednesday, April 19	Sheldrake

An overview of the project including a map of the watersheds can be found at www.newrochelleny.com/flooding .
